SUMMARY

Motivated and enthusiastic Computing & IT student with a strong interest in Cloud Computing, Software Engineering, UI/UX Design, and IT systems. Passionate about applying technical knowledge and creative problem-solving to real-world challenges.

EDUCATION

Rochester Institute of Technology, Dubai Campus

2023 - 2027

Bachelor of Science in Computing and Information Technology | Minor: Finance

- CGPA: 3.36
- Dean's List (Fall 2023) & Dean's List (Fall 2024)

Related Coursework: Software Development and Problem Solving, Computer System Concepts, Task Automation, Intro to Routing & Switching, System Administration I, Web & Mobile, Introduction to Database & Data Modeling.

Activities: IEEE Student Member - RIT Dubai Student Branch (Since 2025)

PROJECT EXPERIENCE

Network Traffic Analyzer

May 2025

- Developed a command-line network traffic analyzer using PyShark (a Python wrapper for tshark) to capture live network packets from specified interfaces, with advanced filtering capabilities and configurable capture durations and saved the data into a csv file.
- Implemented an automated data analysis pipeline to extract protocol statistics and traffic summaries from captured data.
- Visualized traffic patterns using Seaborn and Matplotlib, creating subplots for protocol distribution, top source/destination IPs, and packet length histograms.

Car Rental System

March 2025 - May 2025

- Collaborated and implemented a full-stack car rental system using Java Spring Boot, Semantic UI, Mustache, HTML/CSS, and MariaDB for a seamless web experience.
- Enabled users to browse, filter, and rent vehicles based on preferences, with dynamic car availability and detailed supplier information and built a review and feedback module allowing users to share rental experiences, contributing to service transparency and trust.
- Developed a user-friendly booking flow and integrated real-time data to enhance customer satisfaction and reduce friction.

Web Scrapper + Client Server Application

November 2024

- Worked on a group to create a web scrapper in Python and used multiple libraries such as Selenium library to open the URL and control the website, Requests library to fetch html code, BeautifulSoup to extract data extraction, and Pandas library for storing data.
- Developed a client-server application, where the client can send queries to request data from server (filtering data).

Airport Management System

January 2023 - March 2023

- Worked in a group to create a fully functioning Airport Database Management System using Python & MySQL.
- Assigned tasks related to booking, cancellations and viewing data based on type of employee (Airport Supervisor, Flight Supervisor, Airport Staff) or related to passengers (Viewing tables, scheduling, login/logout).

SKILLS

- Python, Java, JavaScript, Bash
- HTML, CSS, ReactJS, Next.js, Tailwind CSS, Semantic UI, Swift UI, Node.js, Spring Boot
- MySQL, MariaDB
- TCP/IP and OSI Models, Subnetting, DHCP, DNS, NAT, VLANs
- Wireshark, Cisco Packet Tracer
- Docker, CI/CD Concept, Azure
- Teamwork and Project management
- Creativity and Innovative Thinking
- Languages: English, Urdu

CERTIFICATIONS

- Certificate of IEEE Membership
- Microsoft Certified: Azure Fundamentals (AZ-900)
